Education

Nanyang Technological University

Master of Science in Blockchain Technology

(In progress) Aug. 2024 - Dec. 2025

Singapore

Sichuan University

Bachelor of Engineering in Software Engineering

Sept. 2020 – Jun. 2024

Chengdu, China

Experience

Research Assistant

Nanyang Technological University

Jun. 2025 – Present

Singapore

- Implemented a collector, strategy and executor pipeline system with channels using tokio and rust sui-sdk.
- Built an on-chain Event Collector JSON-RPC and a Shio Event Collector with WebSocket to listen to events.
- Built a local CLMM simulator across Cetus/Turbos/Bluefin/Momentum; applied upper-bound pruning and binary-search sizing to discard unprofitable paths early which reduced computational load by **95%**.
- Executed optimized routes as PTBs with dev-inspect/dryRun gating dryRun gating **65%** pass rate on prioritized candidates with DeepBook V3 flash-loan integrated in.

Fullstack Developer

Sight AI

Nov. 2024 – Apr. 2025

Singapore

- Designed and implemented a Sui Move Oracle smart-contract module allowing users to submit FHE-encrypted computation requests and off-chain nodes will calculate the result and write it on chain.
- Configured and maintained a local FHEVM node using the Zama FHEVM library for key generation, client-side encryption/decryption, and homomorphic add/multiply operations.
- Built a TypeScript-based off-chain Oracle service to monitor Sui chain events, invoke FHE computations, and callback results on-chain.

FrontEnd Developer

Zhiwang Technology Co LTD

Jun. 2023 – Oct. 2023

Chongqing, China

- Built the company's official website and admin dashboard using Vue 3, leveraging component-based architecture, Vue Router for routing, and Pinia for state management.
- Integrated front-end with back-end RESTful APIs via Axios, encapsulating request/response interceptors, error handling, and performance optimizations.
- Created interactive data visualization dashboards with ECharts (line, bar, pie charts, etc.), and developed reusable chart components supporting dynamic data updates and theming.

Projects

Mooncl | Aptos move, Next.js, GraphQL, Phaser.js, Shadcn UI, AI Rig Complex

Apr. 2025

Best collaborative Team Award: \$1,000 in Aptos Evermore Hackathon

Hongkong, China

- Developed a content creation platform interface using the Phaser.js game engine, and implemented efficient content retrieval and dynamic data loading with Next.js and GraphQL.
- Created a smart contract to record User-created content and implemented an on-chain reward distribution module.
- Deployed an AI agent system for compliance analysis of user-submitted text and implemented reward distribution.

Vespera | Aptos move, Next.js, GraphQL, Phaser.js, Shadcn UI

Apr. 2025

Best Developer Award: \$1,000 in Aptos Evermore Hackathon

Hongkong, China

- Developed a fund now pay never coffee shop webpage with Next.js and Shadcn UI.
- Design a smart contract system to track user's payment and implemented an automatic repayment module.
- Developed an AI agent system to evaluate every consume's credit.

Timefi | Telegram miniapp, Next.js, Wagmi, Shadcn UI

Nov. 2024

Best Blind App built with Create-Nillion-App: \$2,500 in ETH Global Bangkok

Bangkok, Thailand

- Developed the Telegram mini-app frontend using Next.js. And integrated the dynamic wallet, leveraged wagmi and viem to interact with EVM chains.
- Contributed to the implementation of smart contracts, including ERC20 token transfer and pay back functionalities.

Technical Skills

Languages: Rust, Sui Move, Aptos Move, Solidity, Python, TypeScript, HTML/CSS

Technologies/Frameworks: Foundry, Next.js, Phaser.js, AI Rig Complex, Git, MySQL, Rocket, gRPC

Developer Tools: CI/CD, AWS, Postman, Docker, Redis, Kafka
